Connecting the Right Dots for
Whole Child Development

OUR PHILOSOPHY: CONNECTING

THE RIGHT DOTS

The world is shaped by duality-tradition and change, play and structure, emotion and logic, self and society. These are not opposites to be divided, but connections to be nurtured.

At Abhishri Academy, this belief shapes how we educate young children. We understand that learning begins with connections-in the brain and in life.

In practice, this means we consciously design every experience to connect what truly matters. We do this by:

- Strengthening neural connections through diverse whole-brain experiences
- Integrating dualities such as ancient Indian Knowledge Systems and modern cognitive neuroscience, play and structure, intellect and character
- Nurturing the whole child by supporting all six dimensions of health

**This is what we mean by
connecting the right dots.**

As a parent and educator, I believe early childhood is not about doing more; it is about doing what truly matters. At Abhishri, every choice we make is guided by a simple question:

Does this support how children naturally grow in mind, in heart, and in life?

When we honour this, learning becomes joyful, grounded, and deeply human.

Welcome to Abhishri Academy.

WHAT IS A NEUROEDUCATION SCHOOL?

Learning Designed Around the Brain

A neuroeducation school designs learning to support whole brain development by engaging thinking, emotion, movement, and social interaction together. We integrate research-supported practices found in approaches such as Montessori, Reggio Emilia, and Waldorf, and align them with modern brain science to support balanced and lasting learning.

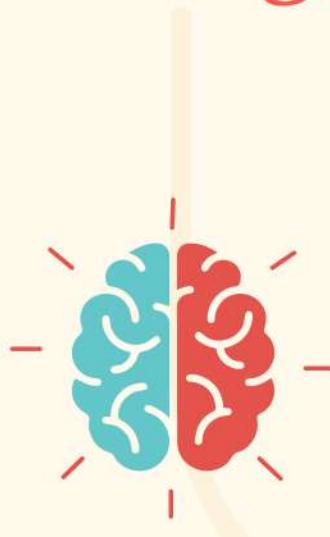

How the Brain Learns

Neuroeducation brings together **neuroscience, psychology, and education** to understand how children learn. Brain research shows that learning happens through the formation of neural connections, and that attention, emotion, movement, and meaningful experiences play a key role in how we learn and remember.

Why Early Childhood Matters

Early childhood is a critical period for brain development. By around **5 years of age**, up to **90%** of the brain's foundational development is complete. During this time, the brain is highly responsive to experience, making emotionally safe, engaging learning environments essential.

Our Six Pillars of Learning & Growth

Neuroscience-Informed Learning

During the early years, the brain rapidly forms and strengthens neural connections that shape how children think, learn, and respond to the world. Our learning design is carefully curated to engage the whole brain, allowing rich, well-connected neural pathways to form, which lay strong foundations for lifelong learning.

Indian Knowledge Systems (IKS)

Children need to know not only where they are going, but also where they come from. By integrating IKS, we help children grow with a deep sense of cultural rootedness, heritage, and belonging. Through stories, traditions, and values, they learn to appreciate the wisdom of their past and carry it forward with pride and respect.

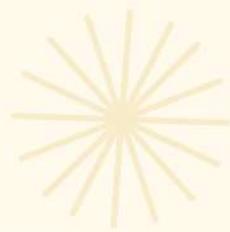

Integrated Character Education

At Abhishri Academy, character is not taught as a separate subject; it is embodied every day. Through daily interactions, shared responsibilities, and guided reflection, children develop kindness, integrity, empathy, and responsibility, because true brilliance is shaped as much by values as by knowledge.

Six Dimensions of Health

True education nurtures the whole child. Our approach supports physical, social, spiritual, environmental, intellectual, and emotional well-being together, recognizing that without balance across all these health dimensions, true happiness and success are not possible.

Mastery Learning and Assessment

Learning is understood as a process, not a performance, where understanding is demonstrated through engagement and real-world application rather than tests alone. Mastery ensures that children build strong, connected foundations by fully understanding concepts before progressing, preventing learning gaps over time.

Personalized After-School Programs

Every child's learning journey is unique. Our after-school programs are guided by a clear understanding of each child's strengths and needs, using an internationally informed framework to support mastery of foundational skills across core subjects while strengthening focus, confidence, and learning habits.

NURTURING BRIGHT BRAINS AND KIND HEARTS

Abhishri Academy is more than a preschool. We are an academy of **early learning**, where teaching is designed around how children's brains naturally learn best.

Guided by this understanding, we embark on a journey to nurture not only intelligence but also character in young minds.

abhi + shri

Moving Toward

Prosperity/Brilliance

Our name has deep roots in Sanskrit. '**Abhi**' means moving toward, and '**Shri**' reflects prosperity, brilliance, and inner radiance.

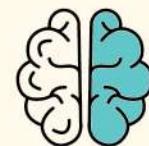

In ancient Vedic texts, Abhishri describes an admixture, a sacred blending that transforms separate elements into something extraordinary. That is exactly what we aspire to create in our students: a harmonious blend of intellect and empathy.

PLAN A VISIT TO ABHISHRI ACADEMY

Explore our learning environment through a guided tour.

Understand the neuroeducation approach and curriculum philosophy.

Get one-on-one interaction with teachers.

Ask questions, clarify doubts, and know the admission process.

Schedule Your Visit

Days: Monday through Saturday

Timings: 09:00 am to 4:00 pm

Contact: +91 95004 00459
